The Excavator-Mounted Rock Drill is a specialized drilling attachment designed for rock drilling, hard rock excavation, and geotechnical applications in construction, mining, roadworks, and foundation projects.

Mounted directly onto an excavator, the drill utilizes the machine's hydraulic system to deliver powerful drilling performance, outstanding flexibility, and reliable operation across a wide range of terrain and job site conditions.

Key Features

- **Powerful rock drilling capability** for efficient penetration of hard rock formations.
- **Easy installation on excavators**, providing excellent mobility and operational flexibility.
- **Improves productivity** while reducing labor requirements and operating costs.
- **Robust and durable construction** for reliable performance in demanding working environments.
- **Ideal for construction, mining, infrastructure, quarrying, and foundation engineering projects.**

The **Excavator-Mounted Rock Drill** is an efficient solution for rock drilling and excavation, helping contractors maximize productivity, improve drilling efficiency, and meet the demands of professional construction and mining operations.
